

BUOY DATA

This page contains the real time water quality readings from our four continuous monitoring buoys in Lake Maurepas: the Amite (blue), Blind (black), Maurepas (purple), and Tickfaw (pink) buoys. By providing real-time data, our aim is to enhance the community's understanding of Lake Maurepas' current status and to elevate their awareness regarding water quality and atmospheric conditions in the area. Click on the buoys in the interactive map below to learn more details about each one.

The water quality parameters monitored by these buoys include CO2, temperature, turbidity, specific conductivity, salinity, dissolved oxygen concentration (mg/L and % saturation), and pH. The Blind Buoy is also fit with a weather station that monitors atmospheric conditions in addition to water quality. This includes air temperature, rain total, rain intensity, dew point, barometric pressure, relative humidity, wind speed, wind gust speed, and wind direction. All water quality and meteorological parameters are measured every 30 minutes, 7 days a week, starting on the date of deployment (1/31/2024).

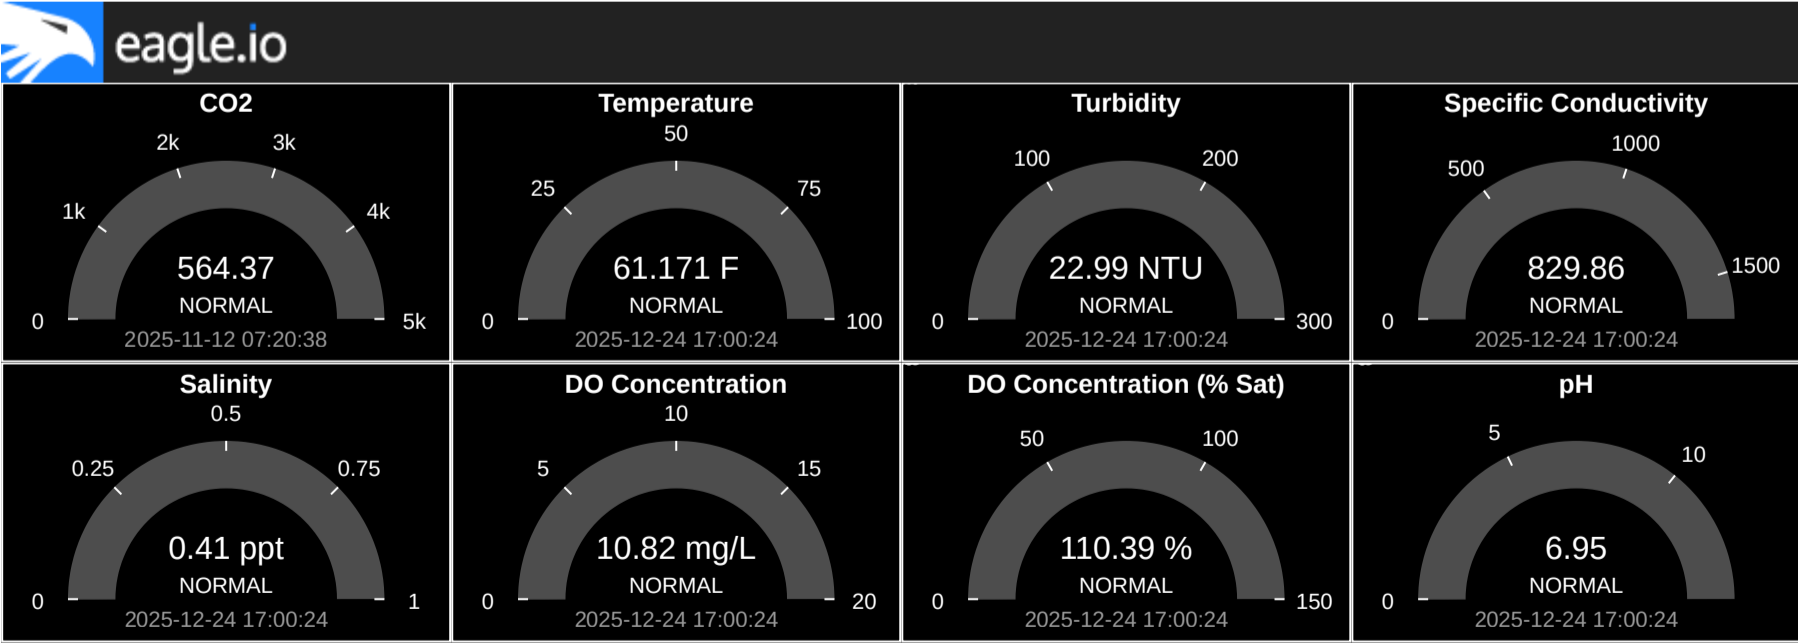

Note: All dashboards and maps presented on this page are provisional and subject to revision.

The figure displays eight water quality parameters, each represented by a gauge chart. The gauges are arranged in a 2x4 grid. The top row contains CO2, Temperature, Turbidity, and Specific Conductivity. The bottom row contains Salinity, DO Concentration, DO Concentration (% Sat), and pH. Each gauge has a semi-circular scale with tick marks and a needle pointing to the current value. The background color of each gauge is a solid color (purple or red). The eagle.io logo is in the top left corner.

Parameter	Current Value	Unit	Status	Timestamp
CO2	0		NORMAL	2025-10-03 19:50:14
